

Compact & Modular Stage Boxes

Stage Box with LK panel male

The compact design of the new SB box is ideal where space is at premium. The SB box has a LK multipin connector mounted on the box, which allows the multipair cable to be disconnected for storage.

Stage box with fan out

The SBF range comes with SS cable and ends with XLRs fan out. The individual pairs are protected by Techflex for maintaining ultimate flexibility. The use of the coloured Techflex allows the easy identification of the channels in the fan. See color code on page 11 .

Stage Box with multipair extension

The SBS come with SS cable permanently attached to the box (individually shielded multi-pair eurocable) in different lengths with an LK multi-pin connector.

19" Box with LK panel male

The SP System, permits separate IN & OUT channels on Stage by running only one multi-pair cable on the long distance (Stage to Mix). The box is manufactured in 15/10 mild steel.

19" Box with fan out

The SPF range comes with SS cable terminated to M/F XLRs with a fan out. This expanded version of the stage box has permanently attached eurocable multi-pair and is available in various input and output combinations. The individual pairs are protected by Techflex for maintaining ultimate flexibility. The use of the coloured Techflex allows the easy identification of the channels in the fan.

19" Box with 2 LK panel male

The SP2 System is ideal for applications where two mixers (FOH and MON) are used. As in SP System, it has a second LK multipin chassis connector on the box in parallel for the Monitor Mixer.
